

LS Chevy Oil Pressure Gauge Adapter AF166-05-02

WARNING!

Please make sure the car is cold and in a stationary position with the park brake engaged and keys out of ignition switch.

AeroFlow's 6061 machined aluminum LS Chevy oil port adapter is available in Blue, Black and Silver and fits LS engines.

This adapter is designed to retain your factory oil pressure switch while adapting to a 1/8" NPT auxiliary port for installing an oil pressure/oil temperature gauge or running an oil feed line to a supercharger or turbocharger.

Installation:

After removing your factory oil pressure switch located at the top rear side of your engine close to the flywheel, install the adapter with the female 1/8" NPT port facing your desired look up position and tighten by hand. Using AeroFlow's 6MM aluminum wrench, tighten a further 1-1 1/2" to 1 1/2" MAX. of a turn allowing the alloy crush washers to have a positive seal.

Be sure not to over tighten adapter as this will lead to damage/leakage.

Happy Motoring!
